Organic: Average Impressions Vs. Average Engagement Rate by Post Category

High Impressions + High Engagement → Strongest performers

High Impressions + Low Engagement → content reaches many people but doesn't generate much interaction.

Low Impressions + High Engagement → niche content that resonates strongly with those who see it

Low Impressions + Low Engagement → Potential areas for improvement

Figure 5. Job opportunity had a high average engagement rate and a high average of impressions. Podcast, News Interview, Original Article, and External article had a low average engagement rate and a low average of impressions.

Figure 7. Event Recap posts generated the highest average engagement rate within Mental Health & HIV, suggesting that this content format was a key driver of audience interaction. Measles and Flu showed more limited variation across categories, likely due to having fewer total posts and therefore fewer opportunities to test different content formats.

Recommendations

- **Adopt a Visual-First Approach:** Prioritize high-impact visuals across all LinkedIn content.
- **Enhance Value Without Duplication:** Share external resources strategically; provide unique value that complements rather than replaces the original source. Pair these with engaging headings and concise excerpts that encourage audience to take action.
- **Implement People-Centered Storytelling:** Humanize the brand by highlighting WEA staff members and internal teams to build connection.
- **Launch Recurring Branded Series:** Establish a consistent content identity through pilot series such as *Employee Spotlight*, *Why It Matters*, *WEA Care*, *60 Seconds With WEA*, and *From the Field*.
- **Optimize Distribution:** Maintain a disciplined, intentional posting schedule and utilize sponsorships to maximize strategic reach.
